PROFESSIONAL SUMMARY

Front-end software engineer specializing in React, TypeScript, and modern JavaScript development, with hands-on experience building responsive, data-driven web applications from initial project setup through production deployment. Strong foundation in reusable component architecture, responsive design, client-side state management, REST API integration, authentication, CRUD workflows, testing, and cloud-backed application development. Comfortable working across UI, application state, and data layers to diagnose technical issues, improve maintainability, and translate product requirements into practical user-facing features. Experienced with Git/GitHub workflows, CI/CD, Vercel deployment, Firebase services, and iterative development in both independent and collaborative project environments.

SKILLS

Languages: JavaScript, TypeScript, Python, HTML5, CSS3

Front End: React, Vite, React Router, Tailwind CSS v4, Redux Toolkit, Material UI, Responsive Web Design

Back End / Data: REST APIs, Flask, Firebase, Firestore, SQL, PostgreSQL

Tools / Delivery: Git, GitHub, Jest, GitHub Actions, Vercel, Postman, VS Code, npm

Engineering: Reusable Components, Front-End Architecture, State Management, API Integration, CRUD, Authentication, Debugging, CI/CD, Code Review

PROJECTS

Shilla Bakery | Freelance Front-End Developer

[GitHub](#)

React, TypeScript, Vite, Tailwind CSS v4, React Router, JSON, Git/GitHub

- Built a mobile-first bakery web application from the ground up with reusable layout, navigation, homepage, menu, and route-based detail components across phone, tablet, and desktop breakpoints.
- Created a data-driven catalog of ~60 products using structured JSON, with search, category filtering, price sorting, product badges, and dynamic detail routes while separating content from presentation logic.
- Implemented a responsive promotional intro-video experience with skip/close controls and session-based display behavior, optimizing media presentation and interaction across desktop and mobile screens.
- Structured routing, assets, reusable components, and UI patterns for maintainability and future expansion while managing iterative development and source control through Git/GitHub.

EasyMart | Software Engineer

[GitHub](#)

React, Vite, Firebase, Firestore, Redux Toolkit, Material UI, React Router, Jest, GitHub Actions, Vercel

- Engineered a responsive e-commerce application with reusable product, cart, checkout, authentication, profile, admin, and order-history flows using React and Material UI.
- Integrated Firebase Authentication and Firestore for asynchronous sign-in, user profiles, product CRUD, order processing, and user-specific purchase history.
- Managed predictable client state with Redux Toolkit, added Jest testing, and configured GitHub Actions-to-Vercel delivery while resolving Vite, project-root, dependency, data, and deployment issues.
- Worked across UI, application state, authentication, and cloud data boundaries to diagnose integration problems and improve reliability throughout development and deployment.

EXPERIENCE

Software Engineer Trainee - Coding Temple | Remote

06/2025 - 04/2026

- Built React/TypeScript front-end applications and Python/Flask back-end services from requirements, applying reusable components, REST API integration, CRUD workflows, relational data, testing, debugging, and deployment practices.
- Used Git/GitHub, Firebase, Redux Toolkit, CI/CD concepts, and iterative project delivery to strengthen full-stack engineering fundamentals and independently troubleshoot implementation issues.
- Completed project-based work spanning authentication, data modeling, API workflows, responsive UI, source control, testing, and technical documentation.

Software Engineer Trainee - CodeStates | Remote

04/2023 - 10/2023

- Collaborated with front-end and back-end teammates using React, JavaScript, HTML/CSS, Git, GitHub, pull requests, code review, and API integration to deliver shared application features.
- Coordinated implementation details across team responsibilities, debugging client-side behavior and integrating shared API-driven features in a collaborative repository.

Signal Corps Soldier / Squad Leader - Republic of Korea Army

08/2017 - 08/2019

- Managed communication systems and technical troubleshooting in time-sensitive environments to support reliable information flow and operational readiness.
- Led and trained junior soldiers as a squad leader and earned promotion to Sergeant through consistent performance, accountability, teamwork, and leadership.

EDUCATION & CERTIFICATIONS

Virginia Tech - Electrical Engineering, Blacksburg, VA

Coding Temple - Certificate, Software Engineering

CodeStates - Certificate, Software Engineering

Meta - Certificate - Meta Front-End Developer

Google - Certificate - Foundations of User Experience Design
